MOTOROLA RADIO BATTERY

DESCRIPTION

Long battery life is vital when you work in security. If your battery dies on you and you can't use your radio it can jeopardise your ability to do your job or even endanger your safety. For this reason, using a cheaply designed battery is not an option. Low quality batteries are made from cheap components that mean their battery life depletes very quickly until they barely recharge at all.

You won't face that risk with this battery for Motorola radios which uses premium grade Japanese cells, with a 1800 mAh capacity and 7.2V of power. This battery has been tested rigorously for reliability, longevity performance to meet the needs of security professionals. As well as long lasting, this battery is made from high impact ABS and polycarbonate plastic polymers so it will withstand wear and tear in even the most challenging security environments.
